

JSB Construction chooses Unit4 to modernize its system support

The investment in a new business system is part of their digitalization and sustainability efforts.

Stockholm, September 11, 2024 – **Unit4** is pleased to announce **JSB Construction AB**, one of Sweden’s largest private construction companies, as a new customer. The investment in **Unit4 ERP** is an important part of **JSB’s** comprehensive digitization process. For **Unit4**, a global provider of SaaS ERP, the deal further strengthens the company’s position as a leading supplier to the Nordic construction sector.

JSB Construction (JSB) builds homes, public buildings, and commercial properties throughout Sweden. The company was faced with the need to replace several legacy IT systems, including financial, production, and purchasing systems.

For JSB, it was crucial to be able to use the business system as the central repository for the company’s master data. The construction sector is typically characterized by a variety of solutions for managing data, all of which identify properties, resources, and people in different ways. A central hub for all the master data makes it possible to bring together the identifying features and to seamlessly integrate different systems with one another.

Unit4 has a powerful finance system with the capacity to handle large volumes of transactions. The company

is well established in the Nordic construction sector and offers JSB the opportunity to expand its system support in several important areas in the future.

Unit4 ERP provides JSB with the financial functions they require: accounting, approval workflow management, time recording, supplier invoices, purchasing management, P&L calculation, and analysis and reporting.

The rich functionality means that Unit4 ERP will be used by a large number of JSB employees. For example, it will be possible to monitor and control project outcomes, load purchase orders from external purchasing systems, manage invoice documents for invoicing to customers, and integrate with standalone project management applications.

“We are very proud to have JSB as a customer. We know from experience that customers of this type often need to be able to scale up their systems over time, either because of increasing volumes as a result of organic growth or the acquisition of new customers with new requirements, among other reasons.

The system changeover project began in August 2024 and is expected to be completed in October 2025.
