

# The Wästbygg Group invests in a new business system from Unit4

**WÄSTBYGG**  
GROUP

**The Wästbygg Group has accelerated its digitization journey and chosen Unit4 ERP, a customizable ERP solution that will meet the group's growing needs.**

The Wästbygg Group is a listed construction and project development company that builds and develops housing, commercial buildings, community properties, and logistics and industrial facilities.

As part of the Wästbygg Group's strategic digitization journey, it has chosen to replace its existing financial and business systems with a new business system that will be used by all the companies within the group.

The introduction of a cloud-based solution will make it possible to increase the number of work processes shared across all the companies and enable them to benefit from a joint information model.

"We were looking for a cloud platform that could replace multiple legacy systems and would also be simple for infrequent users to work with. An important factor for us was also the expertise and consulting experience that Unit4 has in the field of system solutions for the construction industry," says Jessica Gårdmo, CFO at the Wästbygg Group.

It was important for the organization to have a solution that combines a strong focus on projects with a large number of automated processes.

Unit4 ERP is a coherent solution that can be easily and reliably integrated with other systems using the latest technology.

"Our solutions for construction and contracting companies are based on our best practice for the construction industry, which includes the functions needed for a good system set-up. If additional functions are required, it's easy to add new modules. Unit4 ERP is also evolving, and we are using new technologies in areas such as AI, machine learning, and integration solutions," explains Mats van Halteren, Sales Executive at Unit4.

## About Unit4

Unit4's next-generation enterprise resource planning (ERP) solutions power many of the world's mid-market organizations, bringing together the capabilities of Financials, Procurement, Project Management, HR, and FP&A to share real-time information and deliver greater insights to help organizations become more effective.
